phpCart Upgrade
Version 4.10

NEW FEATURES

1) Shipping Zones - Previous shipping techniques in phpCart are now called Legacy Shipping and Zone Shipping provides for a new set of shipping alternatives.

In Zone Shipping, a Global Shipping Zone is provided if you want only a single shipping method for all customers. But if you'd like to add Zones, you can define them by Zip / Postal Code, State / Region or by Country. The cart software searches these options respectively when the customer enters their address in the Checkout Page.

Each Zone can have a different shipping technique and that technique can be selected from:

    a) None
    b) Free Shipping
    c) Shipping price calculated on Order Subtotal and contained within range of values
    d) Shipping price calculated on Order Subtotal and a percent of the subtotal.
    e) Shipping price calculated based on Order Quantity
    f) Shipping price calculated based on Order Weight

In addition, to each zone, you can add a "Pickup" option to your shipping selections and set this to be free or a fixed price.

And lastly, to can:
    a) Add a fixed handling fee.
    b) Add a handling fee based on a percentage of Order Subtotal.
    c) Set a minimum shipping fee.
    d) Set a maximum shipping fee.

See the Zone Shipping documentation for full instructions on how to use this new, exciting functionality.

2) Maximum Quantity of Items in Cart - You can now limit the

quantity of items that a person can put into the cart. When this feature is enabled in the Admin Control Panel, Settings, Cart Setup page and a quantity is provided, the cart will count all the items placed into it. When the limit is hit, can error message will be displayed and the checkout button will be removed.

3) Combine same Product ID Numbers for Quantity Discount -

If you provide quantity discounts for your customers but have multiple options like sizes or colors and want all the options to apply to the discount calculation, you can enable this feature. The feature is located in the Admin Control Panel, Settings, Cart Setup page.

4) Turn Off Order Notifications - You can now turn off Order Notification

Emails to Admin(s) or to the Customer. This feature is useful if your gateway performs this function for you. This featured can be selected in the Admin Control Panel, Settings, Email Configuration page.

5) Send Admin Notification Email upon Cancelled Payment - If

your gateway processor supports cancel (like PayPal) and a customer presses that cancel button, when the customer returns to the cart, the cart will still retain both their product selections and their billing/shipping address information. The customer can now choose if they want to modify their product selections, update their address information, change their shipping and change their gateway selection. When they come back to the cart and you have this feature set, the cart will send you an email notification. The feature is located in the Admin Control Panel, Settings, Cart Setup page.

6) Send Admin Notification Email upon Declined Payment - If

your gateway processor supports declined and send the customer back to the cart using the URL defined in the gateway configuration, the cart will send you an email notification. The feature is located in the Admin Control Panel, Settings, Cart Setup page.

7) "View Your Store" menu button - Has been added the Admin

Control Panel top horizontal menu bar. This button uses the value set in the Settings / Company Website field. This value must contain the URL prefix: http://

in order to work. Using this button will open a new tab in your browser and display your web site.
